

Audio Jammer AJ 1

Audio Recorder Jammer is a device that prevents the non-authorized recording of your conversations with audio cassette recorders or audio digital recorders etc

Keep your private conversations private! The AJ 1 AUDIO JAMMER protects your sensitive room conversations by **generating a random masking sound**, which desensitizes any near-by microphone.

Effective against any microphone based eavesdropping device including tape recorders, RF transmitters, hard-wired microphones (including contact type) and shotgun microphones. It also protects against microwave or laser reflection pickups.

Because the sound from the jammer varies randomly in frequency and amplitude, it cannot be easily filtered and the only sound the eavesdropper will hear is the jammer noise.

The convenient end-mounted control lets you select the level of protection for your situation. One unit will protect up to 150 sq. ft. For protecting rooms larger than this, we recommend an additional jammer for each 150 sq. ft. of area.

The illustrated instructions show suggested jammer placement for different types of rooms and situations so that you can use the AJ 1 effectively. The AJ 1 is powered by one 9 volt alkaline battery (included). The unit measures 4" x 2.5" x 1.5" and weighs 7 oz

The Audio Recorder Jammer suppresses the operation of the digital audio recorders, mini audio transmitters etc. by radiating noise interference.

The parameters of the noise interference are especially adapted for the suppression of many types of recorders.

The unit is discreet and can be used on a desk clock, it is also light enough to carry around in a briefcase.

NOTICE: THIS DEVICE MAKES A LOUD, ANNOYING, STATIC SOUND JUST LIKE YOU WOULD HERE IF YOU TUNED TO A BLANK RADIO OR TV STATION. IT MAKES A LOT OF NOISE. IT IS NOT A SUPER SECRET STEALTHY DEVICE THAT DEACTIVATES MICROPHONES SILENTLY.

THERE ARE NO REFUNDS OR RETURNS ON THIS DEVICE
